KUHNE Anlagenbau was attending to Packaging & Recycling in Milano

The recycling targets in Europe are well known by now. Plenty of new concepts enabling circular economy have been shown already at K'19 and K'22. Still the challenge remains to cut plastic waste without any compromise on the performance of food packaging applications.

One key additional requirement is still lightweight as the main steering tool are EPR fees (Italy is a good example) or even weight-based plastic taxes by governments. Among the many applications KUHNE Anlagenbau covers, we highlight the latest innovation on thermoforming. Basically, all typical polymers like PP or polyolefines, PET or PA can be processed as mono materials. The developed machine concept allows around 50% down-gauging without any

impact on the properties. This applies for the forming web as well as for the lidding film, which are both produced on one and the same machine. The main stakeholders, brand owners as well and retailers (with private labels), need to keep the performance level of packaging to reduce the food waste to a minimum, which would have a tremendous impact on the GHG footprint. At the same time packaging should be as lightweight as possible to keep fees as low as possible.

Dynamic duo Erhan Haykircan, Sales Manager, and Heiko Schenck, Consultant, captivantly present the myriad benefits of Triple Bubble®, transforming the packaging landscape.

10th edition of the Speciality Films & Flexible Packaging Global Summit

Join us at the 10th edition of the Speciality Films & Flexible Packaging Global Summit on August 31st and September 1st in Mumbai, India! We are excited to announce that KUHNE Anlagenbau will be presenting a special session showcasing our innovative Cool Bubble® and Triple Bubble® Tech-

nologies. Discover how our cutting-edge cooling systems are revolutionizing flexible packaging, enhancing performance, and taking sustainability to new heights. Don't miss out on this opportunity to explore the future of packaging with us at the summit!
